| GRESB Validation  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |  |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| Automatic         | Automatic validation is integrated into the portal as participants fill out their Assessments, and consists of errors and warnings displayed in the portal to ensure that Assessment submissions are complete and accurate.                                                                                                                                                                                                                                                                                       |  |  |  |  |
| Manual            | Manual validation takes place after submission, and consists of document and text review to check that the answers provided in Assessment are supported by sufficient evidence. The manual validation process reviews the content of all Assessment submissions for accuracy and consistency.                                                                                                                                                                                                                     |  |  |  |  |
| Boundaries        | The evidence provided in Performance R1.1 Reporting Characteristics is reviewed for a subset of participants to confirm that all direct real estate assets held by the reporting entity during the reporting year are included in the reporting boundaries.  Not Selected                                                                                                                                                                                                                                         |  |  |  |  |
|                   | Asset-level Data Validation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |  |  |
| Logic Checks      | There is a comprehensive set of validation rules implemented for asset-level reporting. These rules consist of logical checks on the relationships between different data fields in the Asset Portal. These errors appear in red around the relevant fields in the Asset Portal Data Editor, along with a message explaining the error. Participants cannot aggregate their asset data to the portfolio level, and therefore cannot submit their Performance Component, until all validation errors are resolved. |  |  |  |  |
| Outlier Detection | Based on statistical modelling, GRESB identifies outliers in reported performance data for selected indicators in the Real Estate Performance Component. This analysis is performed to ensure that all participating entities included in the benchmarking and scoring process are compared based on a fair, quality-controlled dataset.                                                                                                                                                                          |  |  |  |  |

| Logic Checks                                                                                                                                                                                                                         | There is a comprehensive set of validation rules implemented for asset-level reporting. These rules consist of logical checks on the relationships between different data fields in the Asset Portal. These errors appear in red around the relevant fields in the Asset Portal Data Editor, along with a message explaining the error. Participants cannot aggregate their asset data to the portfolio level, and therefore cannot submit their Performance Component, until all validation errors are resolved. |  |  |  |
| Outlier Detection                                                                                                                                                                                                                    | Based on statistical modelling, GRESB identifies outliers in reported performance data for selected indicators in the Real Estate Performance Component. This analysis is performed to ensure that all participating entities included in the benchmarking and scoring process are compared based on a fair, quality-controlled dataset.                                                                                                                                                                          |  |  |  |

### Leadership

### ESG Commitments and Objectives

This aspect evaluates how the entity integrates ESG into its overall business strategy. The purpose of this section is to (1) identify public ESG commitments made by the entity, (2) identify who is responsible for managing ESG issues and has decision-making authority, (3) communicate to investors how the entity structures management of ESG issues, and (4) determine how ESG is embedded into the entity.

### Reporting

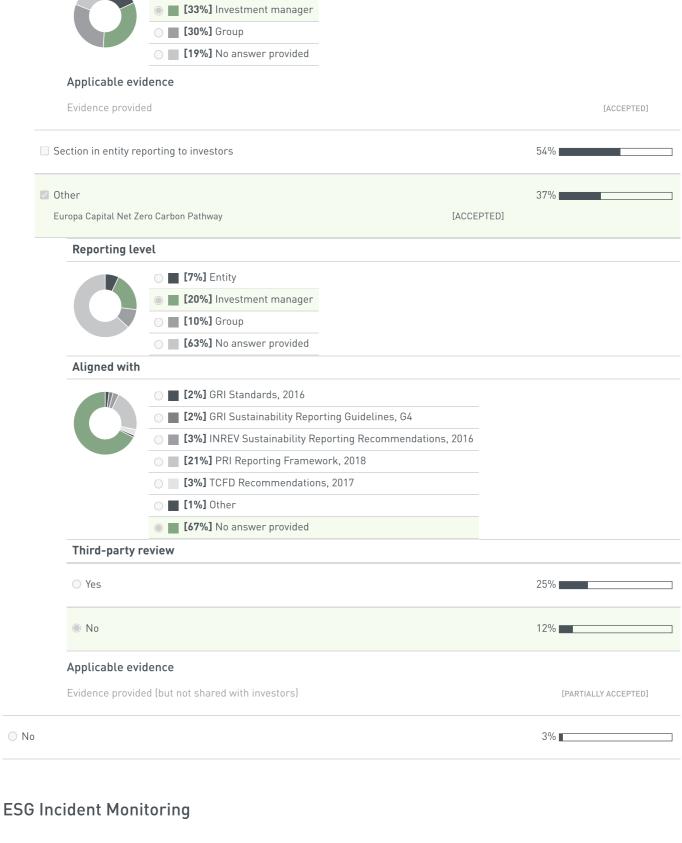

#### **ESG** Disclosure

Institutional investors and other shareholders are primary drivers for greater sustainability reporting and disclosure among investable entities. Real estate companies and managers share how ESG management practices performance impacts the business through formal disclosure mechanisms. This aspect evaluates how the entity communicates its ESG actions and/or performance.

**RP1** Points: 3.44/3.5

#### Climate Related Risk Management

RM5 Not Scored

#### Resilience of strategy to climate-related risks

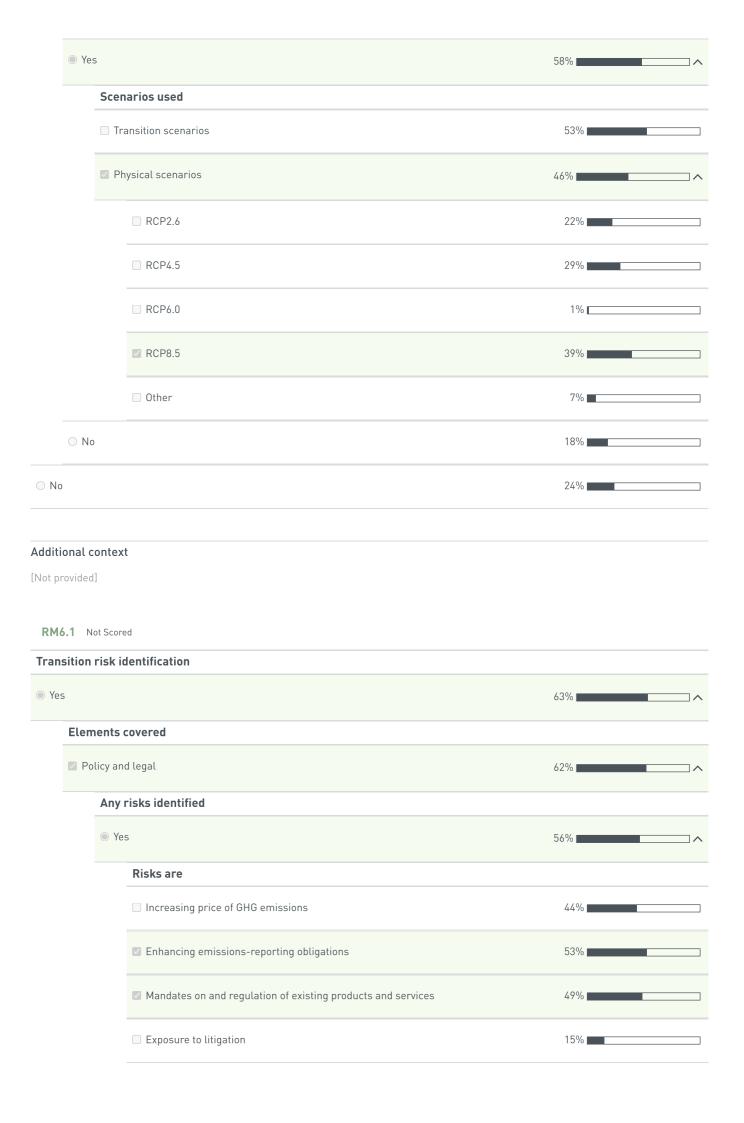

Yes

76%

#### Description of the resilience of the organization's strategy

The Fund strategy to resilience incorporates both transition and physical climate-related risks. The approach is regularly reviewed to ensure climate-related risks of appropriate range/depth are addressed in line with industry knowledge and understanding. We strive to ensure sustainability and climate-related risks are identified and understood throughout each stage of the ownership cycle. Europa Capital identifies and manages the short, mid and long-term risks associated with changing regulatory and stakeholder requirements, as well as physical, social and transitional climate change resilience related risks. For standing assets, climate-related issues are considered in the acquisition process during the Building Sustainability Audit due diligence process (BSAT methodology) which is completed for all acquisitions. Implementation of controls identified through due diligence are progressed through objectives set out within Sustainability Asset Management Plans (SAMs) following acquisition. Climate-related risks and progress are also monitored through asset risk assessments, asset reporting and technical/energy audits.

### Stakeholder Engagement

#### **Employees**

Improving the sustainability performance of a real estate portfolio requires dedicated resources, a commitment from senior management and tools for measurement/management of resource consumption. It also requires the cooperation of other stakeholders, including employees and suppliers. This aspect identifies actions taken to engage with those stakeholders, as well as the nature of the engagement.

|                      | Туре     | Long-term target | Baseline year | End year | Externally communicated |
|----------------------|----------|------------------|---------------|----------|-------------------------|
| 🗐 Data coverage      | Absolute | 100%             | 2020          | 2030     | Yes                     |
| Minimum B rating EPC | Absolute | 100%             | 2020          | 2030     | Yes                     |

# Methodology used to establish the targets and anticipated pathways to achieve them:

Targets have been set to ensure 100% data coverage for buildings by 2030 as well as ensuring all buildings have obtained a both a green building certification (such as BREEAM) and achieved a minimum EPC rating B. Going forward, EFVI will review setting of targets, to identify an energy and GHG reduction target in alignment to Europa Capital's net zero commitment.

## Portfolio Decarbonization

### Disclaimer

This report presents an analysis of the potential risk of an asset being stranded based on pathways developed by CRREM. The CRREM pathways were initially developed as a European initiative to understand the carbon risk of the real estate sector. They have since been expanded to include both a decarbonisation pathway and an energy demand pathway for other countries as well.

The analysis presented in this report is based on the current version of the CRREM pathways (as of September 2022). Updated pathways are expected to be released in early 2023. The new pathways are expected to be more stringent and updated transition risk analysis with regards to this portfolio might result in different outcomes. It is important to note that the pathways are always liable to change based on the state and pace of development in the global real estate markets, modifications to the CRREM methodology, as well as revisions to the carbon budget based on the most recent science.

Furthermore, this report uses the CRREM national pathways. Given the variety of the countries covered, the diversity of sub-national energy grid systems therein, the information in this report is indicative. This is particularly true for the energy demand pathways. These insights are intended to drive conversation and analysis, not used as investment advice.

# **GHG Intensities Insights**

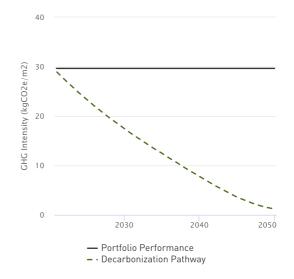

This section provides an overview of the GHG intensity performance of this portfolio compared against the relevant <u>CRREM Decarbonization Pathways</u>. It provides a high-level indication of the portfolio's current state of alignment with climate goals or transition risk objectives. The percentage of Floor area at risk, Assets at risk and Portfolio average stranding year are calculated taking into account the assets covered by the analysis; i.e. assets with 100% GHG emissions Data Coverage (area/time) that covers the entire reporting year, and an available corresponding decarbonization pathway.

For insights into which of your assets are most exposed to climate-related transition risk (regardless of data coverage) and how this may affect your portfolio over time, get your <u>Transition Risk Report</u>.

The portfolio decarbonization pathway is a floor area-weighted aggregation of the top-down, property type and region-specific decarbonization pathways derived by <u>CRREM</u>.

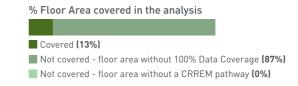

The portfolio performance is a floor area—weighted aggregation, of the GHG intensity for all assets with 100% GHG emissions Data Coverage (area/time) that covers the entire reporting year, and an available corresponding decarbonization pathway.

#### Portfolio GHG Performance Against the CRREM Pathways

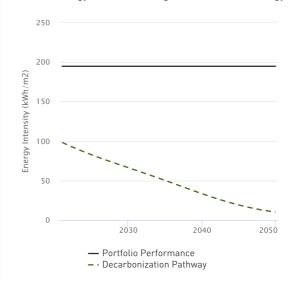

# **Energy Intensities Insights**

This section provides an overview of the energy intensity performance of this portfolio compared against the relevant <u>CRREM Energy Pathways</u>. It provides a high-level indication of the portfolio's current state of alignment with climate goals or transition risk objectives. The percentage of Floor area at risk, Assets at risk and Portfolio average stranding year are calculated taking into account the assets covered by the analysis; i.e. assets with 100% energy consumption Data Coverage (area/time) that covers the entire reporting year, and an available corresponding energy pathway.

The portfolio energy pathway is a floor area—weighted aggregation of the top-down, property type and region-specific pathways derived by <u>CRREM</u>.

The portfolio performance is a floor area-weighted aggregation, of the energy intensity for all assets with 100% energy consumption Data Coverage (area/time) that covers the entire reporting year, and an available corresponding energy pathway.

# **Energy Ratings**

#### Portfolio

|                      | Rated Area | Rated GAV* | Total Rated Assets | Total Assets |  |
|----------------------|------------|------------|--------------------|--------------|--|
| EnEV Energieausweise | 37.82%     | N/A        | 5                  | N/A          |  |
| EU EPC - B           | 7.85%      | N/A        | 2                  | N/A          |  |
| EU EPC - C           | 6.38%      | N/A        | 3                  | N/A          |  |
| EU EPC - A           | 3.13%      | N/A        | 4                  | N/A          |  |
| Total                | 55.18%     | N/A        | 14                 | 16           |  |
|                      |            |            |                    |              |  |

<sup>\*</sup>Given that this field is optional, it may not be provided for all reporting entities.

## Risk Assessment

This aspect identifies the physical and transition risks that could adversely impact the value or longevity of the real estate assets owned by the entity. Moreover, it tracks the efficiency measures implemented by the entity over a period of three years.

<sup>\*</sup>In case of assets certified more than once, this number is capped at 100%.
\*\*Given that this field is optional, it may not be provided for all reporting entities

## Use of risk assessment outcomes

Above selected issues were assessed on acquisition then reviewed at least annually. All assets in this fund have been subjected to sustainability risk assessments as part of acquisition due diligence process. All standing investments were acquired in the last three years. In addition, risks are now reviewed on an annual basis as part of the Europa EMS.

#### Entity Benchmark

ESG transparency is the foundation for improving the operational performance of assets in real estate portfolios and making progress towards sustainable real assets.

Thanks to an industry-wide commitment to reporting Energy data at the asset level, we are able to provide clearer and more granular ESG data and insights as well as conduct asset-level validation with automated error and outlier checks. The algorithms are iterative, they will be developed based on feedback provided on an on-going basis. The results provide access to consolidated ESG performance at the portfolio level that is underscored by improved data quality at the asset level

Energy intensities are a fundamental metric of the environmental performance of an asset. These metrics can be used for measuring asset performance over time and for comparison against local/national targets and global goals.

#### Calculation methodology

The average Energy intensity for the Entity is calculated for all assets from this Property Sub-Type where the Data Coverage (in terms of floor area and time) is 100% and data for the entire year has been reported. Intensity calculations are weighted by floor area.

kWh/m<sup>2</sup> kWh/m<sup>2</sup>

- If Data Coverage (Area/Time) = 100% and Energy consumption data for the entire year has been reported, the asset is included in the calculation.
- If Data Coverage (Area/Time) < 100%, and/or the data reported does not cover the full reporting year, the asset is excluded from the calculation to minimize any potential skew relating to underlying data bias (e.g. consumption heterogeneity or seasonal effects).

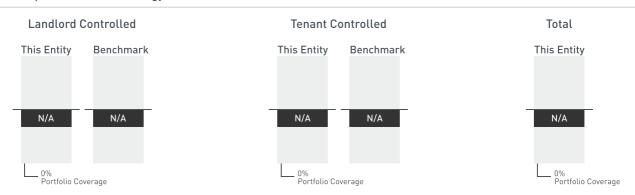

GRESB uses the eligible assets' GFA as a denominator for determining intensities\*, and displays calculated values in either kWh/m2 or kWh/sq.ft. depending on the unit selected by the participant.

Assets with identified outliers substantially higher than the upper thresholds as defined in the <u>GRESB Data Validation Process</u> are excluded from the calculations.

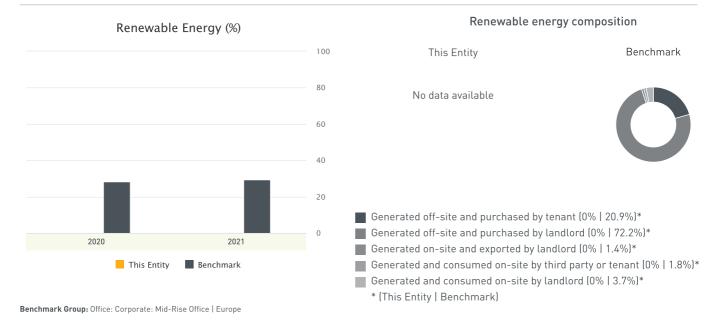

\*All GRESB participants are required to use the GFA to report the size of their assets. Participants with information on the Lettable Floor Area (LFA) only were allowed to estimate the size of their common areas (difference between GFA and LFA) using ratio ranges pre-determined by GRESB.

#### Entity Benchmark

ESG transparency is the foundation for improving the operational performance of assets in real estate portfolios and making progress towards sustainable real assets.

Thanks to an industry-wide commitment to reporting Water data at the asset level, we are able to provide clearer and more granular ESG data and insights as well as conduct asset-level validation with automated error and outlier checks. The algorithms are iterative, they will be developed based on feedback provided on an on-going basis. The results provide access to consolidated ESG performance at the portfolio level that is underscored by improved data quality at the asset level.

Water intensities are a fundamental metric of the environmental performance of an asset. These metrics can be used for measuring asset performance over time and for comparison against local/national targets and global goals.

#### Calculation methodology

The average Water intensity for the Entity is calculated for all assets from this Property Sub-Type where the Data Coverage (in terms of floor area and time) is 100% and data for the entire year has been reported. Intensity calculations are weighted by floor area.

 $dm^{3}/m^{2}$   $dm^{3}/m^{2}$ 

- If Data Coverage [Area/Time] = 100% and Water consumption data for the entire year has been reported, the asset is included in the calculation.
- If Data Coverage (Area/Time) < 100%, and/or the data reported does not cover the full reporting year, the asset is excluded from the calculation to minimize any potential skew relating to underlying data bias (e.g. consumption heterogeneity or seasonal effects).

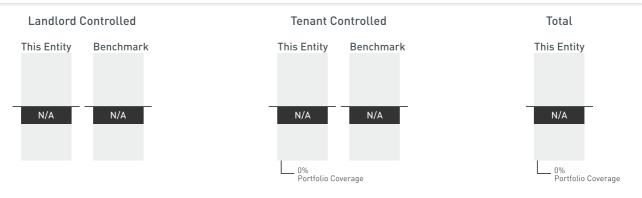

GRESB uses the eligible assets' GFA as a denominator for determining intensities\*, and displays calculated values in either  $m^3/m^2$  or  $m^3/sq.ft$ . depending on the unit selected by the participant.

Assets with identified outliers substantially higher than the upper thresholds as defined in the <u>GRESB Data Validation Process</u> are excluded from the calculations.

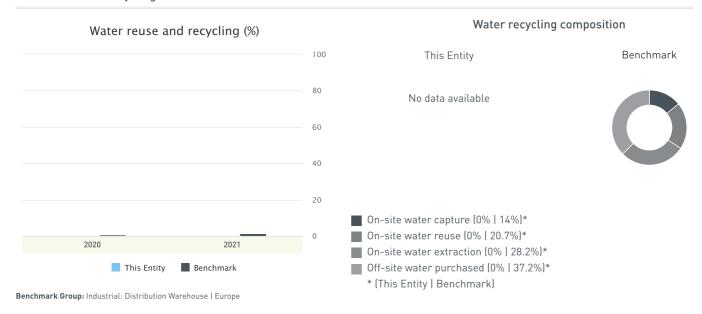

\*All GRESB participants are required to use the GFA to report the size of their assets. Participants with information on the Lettable Floor Area (LFA) only were allowed to estimate the size of their common areas (difference between GFA and LFA) using ratio ranges pre-determined by GRESB.

# Data Monitoring & Review

# Review, verification and assurance of ESG data

Submitting ESG data for third-party review improves data quality and provides investors with confidence regarding the integrity and reliability of the reported information. This aspect recognizes the existence and level of third party review of energy, GHG emissions, water, and waste data.

# **ESG Requirements**

Integrating ESG requirements into construction activities can help mitigate the negative impact on ecological systems, and at the same time improve the environmental efficiency of buildings in the operational phase. This aspect assesses the entity's efforts to address ESG-issues during the design, construction, and site development of new buildings.

|      | Europa Capital is committed to engaging with the community to address concerns through all stages of its development. For larger developments community consultations are commonly held with key stakeholders as an opportunity for local residents, members the local business community, and other landowners to raise any questions and for issued to be addressed. The consultations are used to drive management of ESG-specific issues. Europa Capital seeks to identify opportunities to enhance community spaces, where possible, such as integrating co-working spaces and landscaping/improvement of outdoors spaces to improve the health an wellbeing of building users and local communities. Community Newsletter's are a common means by which construction updates and sign posting of future works are communicated to the local communities of the development sites. |      |  |  |  |
